# Ove Bepari

**Site Reliability & Performance Engineer** · Dhaka, Bangladesh

+880-1679-122103 / ovebepari@gmail.com↗ / linkedin.com/in/ovebepari↗ / github.com/ovebepari↗

Site reliability engineer with **4 years** of experience operating a US electronic health records platform of 30+ JVM services handling millions of requests a day. With a background in backend development, I trace production issues through the JVM, the Linux kernel, and the network stack to their root cause, and implement lasting fixes.

## 01 Experience

**Sep 2022 – Present** — **Application Operations & Reliability Engineer II**
Therap BD Ltd.
*Part of Therap Services LLC (USA) — electronic health records for the US disability services sector*

- **Release Engineering:** Own production release cycles across **30+** JVM and Dockerized services handling **millions of daily requests**, including Raft-backed consensus clusters. Handle deployment ordering, canary releases, smoke tests, and rollbacks.
- **Observability:** Own Datadog APM, dashboards, and alerting across **40+** services. Co-architected the log pipeline (Vector → Kafka → Falcon LogScale) with Grafana dashboards. Reduced MTTD from days to **under 5 minutes**.
- **Production Debugging:** Dig into JVM internals with JFR, read Wireshark captures, and trace from symptoms to root cause at the Linux level — fd leaks, thread pool exhaustion, page cache thrashing. Most incidents resolved within **1–2 hours**.
- **Distributed Systems:** Manage Hazelcast and Oracle Coherence clusters in production. Identify split-brain scenarios, diagnose quorum and merge-policy gaps.
- **Incident Response:** On-call rotation owner. Run blameless postmortems and chaos engineering game days.
- **ML Infrastructure:** Own vLLM-based model serving for internal use, with JVM client integration.

**Apr 2018 – Aug 2022** — **Full-time study**
BSc in Computer Science & Engineering, DUET

**Feb 2016 – Aug 2017** — **Backend Developer (Pre-University)**
TicketBD

- **Concurrency & Scale:** Built the reservation engine around a MySQL claim table with row-level locking, preventing double-bookings during flash sales. Took the backend from prototype to production at commercial scale.

## 02 Projects

github↗ **Custom Raft Consensus Engine** · Python 3, network sockets, RPC

- Implemented an independent Raft consensus engine from the Ongaro–Ousterhout specification — leader election, log replication, heartbeat broadcasting — and validated state-machine safety and partition survival under simulated split-brain faults.

github↗ **Encrypted FUSE Filesystem — sec_fs** · C, FUSE3, Linux VFS

- Built a lightweight FUSE3 filesystem in C that transparently encrypts data on write and decrypts on read, designed for secure storage of secrets and keys. Undergraduate thesis at DUET.

## 03 Skills

| | |
|---|---|
| **Systems & Infra** | Linux (systemd, syscalls, VFS, page cache, perf/ftrace, eBPF), Kubernetes, Docker, Nginx, JVM (GC tuning, JFR, JMX, thread dumps) |
| **Distributed & Cloud** | Raft, Kafka, Hazelcast, Oracle Coherence, AWS, Oracle Cloud |
| **Networking** | TCP/IP, DNS, TLS, socket I/O, Wireshark, F5 BIG-IP LTM |
| **Observability** | Datadog (APM, monitors, dashboards), Vector, Falcon LogScale, ELK Stack, Prometheus, Grafana |
| **Languages** | Go (goroutines/channels), Python (multiprocessing/C-API), C, C++, Bash, SQL |
| **CI/CD & Automation** | Jenkins, Ansible, Git, shell scripting, release pipelines |
