github.com/ovebepari

Backend engineer turned SRE with 4 years of keeping JVM and containerized services running at scale. I own service health, troubleshoot runtime and performance issues across JVM internals, the Linux kernel, and the network stack, and automate away toil.

EXPERIENCE

THERAP BD LTD. **2022 – Present**

Application Operations & Reliability Engineer II Dhaka, Bangladesh

Part of Therap Services LLC (USA) — Electronic health records for the US disability services sector

- **Release Engineering:** Own production release cycles across **30+ JVM and Dockerized services** handling **millions of daily requests**, including Raft-backed consensus clusters. Handle deployment ordering, canary releases, smoke tests, and rollbacks.
- **Observability:** Built the log aggregation stack (Vector → Kafka → Falcon LogScale) covering **40+ services** with Grafana dashboards and Datadog alerting. Brought **MTTD from days down to under 5 minutes**.
- **Production Debugging:** Routinely dig into JVM internals with JFR when GC pauses spike, read Wireshark captures when traffic looks off, and trace from symptoms down to root cause at the Linux level — fd leaks, thread pool exhaustion, page cache thrashing. Most incidents **resolved within 1–2 hours**.
- **Distributed Systems:** Manage Hazelcast and Oracle Coherence clusters in production. Identify split-brain scenarios and diagnose quorum and merge-policy gaps. Run disaster recovery drills and capacity planning.
- **Incident Response:** On-call rotation owner. Run **20+ blameless postmortems** so far, plus chaos engineering game days. Turn findings into detection rules and automated safeguards so the same failure doesn't happen twice.
- **ML Infrastructure:** Deployed and maintain vLLM-based model serving for internal use, with JVM client integration.

Dhaka University of Engineering & Technology — BSc in Computer Science & Engineering **2018 – 2022**

TICKETBD **2016 – 2017**

Backend Developer (Pre-University) Dhaka, Bangladesh

- **Concurrency & Isolation:** Built the reservation engine around a MySQL claim table that tracks in-flight purchases — any ticket being bought gets locked by row, preventing double-bookings even during flash sale spikes.
- **System Scalability:** Took the backend from prototype to production, handling real-time ticket transactions at commercial scale.

PROJECTS

Custom Raft Consensus Engine *| Python 3, Network Sockets, RPC [GitHub]*

- Implemented an independent Raft consensus engine ground-up from the Ongaro-Ousterhout specification, featuring leader election, randomized timers, heartbeat broadcasting, and log replication.
- Validated state-machine safety, partition survival, and log consistency by simulating split-brain faults and randomized node drops.

Encrypted FUSE Filesystem - sec_fs *| C, FUSE3, Linux VFS [GitHub]*

- Built a lightweight FUSE3 filesystem in C that transparently encrypts data on write and decrypts on read, designed for secure storage of secrets and keys. Undergraduate thesis at DUET.

SKILLS

Systems & Infra:
Linux (systemd, Syscalls, VFS, Page Cache, perf/ftrace, eBPF), Kubernetes, Docker, Nginx, JVM (GC tuning, JFR, JMX, Thread Dumps)

Distributed & Cloud:
Raft, Kafka, Hazelcast, Oracle Coherence, AWS, Oracle Cloud

Languages:
Go (Goroutines/Channels), Python (Multiprocessing/C-API), C, C++, Bash, SQL

Networking:
TCP/IP, DNS, TLS, Socket I/O, Wireshark, F5 BIG-IP LTM

Observability:
Vector, Falcon LogScale, ELK Stack, Prometheus, Grafana, Datadog

CI/CD & Automation:
Jenkins, Ansible, Git, Shell scripting, Release pipelines

EDUCATION

Dhaka University of Engineering & Technology (DUET) **2018 – 2022**

BSc in Computer Science & Engineering
